DETAILED ACTION

1. A telephone interview was made on April 26, 2007 to resolve 112 issues and authorization for this examiner's amendment was given in a telephone interview with Alicia M. Choi on April 26, 2007. Based on the interview, Examiner's amendment has been made for independent claims 1 and 10.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claims 1-44 are pending.

EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Alicia M. Choi on April 26, 2007.

5. Claims 1 and 10 are amended as follows.
 1. (Currently Amended) An authentication method for identifying a subscriber of a first

network in a second network, comprising:

accessing a value added service platform in the second network being an internet protocol network from the first network being a general package radio services network by a terminal of the subscriber;

allocating an Internet protocol (IP) address of said second network to said subscriber;

generating information about a mapping between the subscriber's IP address in said second network and a subscriber identity; and

transmitting the mapping to said second network,

wherein said subscriber is identified in ~~a~~ said value added service platform based on said mapping information.

10. (Currently Amended) An authentication system for identifying a subscriber of a first network a second network, comprising:

a terminal of the subscriber configured to access a value added service platform in the second network being an internet protocol network from the first network being a general packet radio services network by ~~a~~ said terminal of the subscriber;

a gateway device comprising allocation means for allocating an Internet protocol address of said second network to said subscriber, and authentication client means for generating an information about a mapping between said Internet protocol address of said second network and a subscribe identity, and for transmitting said mapping information to said second network; and

an authentication server provided in said second network and configured to log and maintain said mapping information,

Art Unit: 2136

wherein said authentication server is a server for a ~~said~~ value added service platform provided in said second network, wherein said value added service platform is configured to identify said subscriber based on said mapping information.

Response to Arguments

6. Appellant's arguments filed on 02/14/2007 have been fully considered and they are persuasive.

Allowable Subject Matter

7. The following is an examiner's statement of reasons for allowance:

Claims 1-44 are allowed over a prior art of record.

Claims 1, 10, 16, and 44: Prior art of record neither alone nor in combination teach an authentication method/system/device for identifying a subscriber of a first network in a second network comprising accessing a value added service platform in the second network from the first network and wherein the first network is a GPRS and the second network is IP network and identifying the subscriber based on a mapping information transmitted.

Claim 2-9, 11-15, and 17-43 are allowed because of dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for

Art Unit: 2136

Allowance.”
